

Aqua AI — Breeders App Guide

Version 4.0 · May 2026 · Complete Breeder Manual · Operated by Humara Ltd, Registered in England and Wales

1. Welcome to Aqua AI Providers

The Aqua AI Providers app is designed for professional service providers on the Aqua AI platform. This guide covers the Breeder role. Breeders manage species stock, track performance, list on the marketplace, and use AI-powered business tools to grow their operation.

Both Breeder and Consultant roles are available within the same app and can be held simultaneously.

2. Permissions

- Location — required for marketplace listings and appearing in nearby search results
- Camera — used for uploading images (species, listings, profile)
- Photo Library / Gallery — to select images from device storage

- Notifications — for booking requests, messages, enquiries, purchase activity, and system alerts

3. Sign Up and Account Creation

Open the app, tap Sign Up, and you will be taken to the sign-in and registration area. Create your account by entering your name, email address, and password. Password reset works through the same domain flow as the standard user app.

Breeder

Sell species, manage inquiries, build your brand.

Select provider role — Breeder or Consultant

4.1. Breeder Application

Application details include: business name, bio, address, contact information, social links, and other profile details relevant to your breeder account. Once complete, tap Apply.

4.2. After Applying

You will receive an email confirming your application has been submitted. Provider approval is handled by head office and usually takes 24 to 48 hours. There is no separate approval status or

waiting screen inside the app. Once approved, log back in and

5. Breeder Subscription and Pricing

5.1. Standard Subscription

£24.99 per month or £239.99 per year. No sales commission. No extra cost per sale. One fixed fee only. Breeders pay one subscription and keep 100% of their sales revenue.

5.2. Early Adopter Promotional Pricing

Aqua AI offers promotional pricing for the first 100 registered breeders. Early adopters receive a reduced rate that is locked in for as long as they remain subscribed.

- Promo Monthly: £19.99/month
- Promo Annual: £189.99/year

This promotional rate is grandfathered — meaning it stays with you permanently as an early adopter, regardless of future price changes. If you cancel your subscription, you have a 30-day grace period in which you can resubscribe and retain your promotional rate. After 30 days, the standard pricing will apply.

5.3. Optional Certification Tiers

Breeders may opt into certification tiers for enhanced credibility and platform visibility:

- Aqua Certified: £250/year — entry-level certification with platform verification
- Professional: £699/year — enhanced verification, additional badge visibility
- Master Breeder: £1,499/year — highest tier with premium visibility and priority placement

Certification is evidence-based and earned through verified platform activity, not self-declared.

6. Breeder Hub Dashboard

The main breeder dashboard is called the Breeder Hub. It shows your enquiries, the number of species you have for sale, and your breeder status (open or closed). This gives you a quick overview of activity as soon as you open the app.

6.1. Main Tabs

The Breeder Hub includes five main sections: Manage Species, Badges, Analytics, Settings, and Trust Intelligence. You also have access to the Provider AI Business Assistant, notifications, research tools, marketplace, messaging, species tab, and profile.

Breeder Hub — main dashboard

7. Manage Species

7.1. Add a Species

Open Manage Species and tap the purple plus button. Choose the type (Freshwater, Saltwater, Pond fish, or Inverts). Search for the species in the Aqua AI database. Enter the quantity available, set a minimum price and maximum price, and add notes. Save the entry.

7.2. Edit, Duplicate, or Delete

After saving, manage species entries at any time: edit details, change pricing, update notes, change photos, delete entries, duplicate listings, and create different size variations for species where needed.

The screenshot shows the 'My Species' app interface. At the top, there's a header with 'AQUA AI', a notification bell, a search icon, and a 'Switch' button. Below the header, the title 'My Species' is centered. A species entry for 'Black Neon Tetra' is shown with its scientific name 'Hyphessobrycon herbertaxelrodi', stock '8', and price '---'. It has a green checkmark and the text 'Listed on Marketplace'. Below this is the 'Add Species' section. It features four tabs: 'Freshwater' (selected), 'Saltwater', 'Pond Fish', and 'Invertebrate'. A search bar contains the word 'Neon'. Below the search bar, a list of suggestions is shown: 'Paracyprinomis nigripinnis', 'Green Neon Tetra' (with scientific name 'Paracheirodon simulans'), 'Neon Green Rasbora' (with scientific name 'Microdevario kubotai'), and 'Neon Jewel Cichlid' (with scientific name 'Rubricatichromis sp. Neon'). Below the suggestions is a quantity selector with minus, zero, and plus buttons. Further down are input fields for 'Price Min', 'Price Max', and 'Notes'. At the bottom is a large purple 'Save' button.

Species detail — edit and manage

7.3. Stock Control

Manage stock directly: increase stock, reduce stock, mark a species as sold out, or use the Restock option when new stock becomes available. When fish are sold, stock is automatically reduced. If stock reaches zero, the marketplace listing can be removed while the species remains saved in your species list. You can restock later without creating the species again from scratch.

8. List Species on Marketplace

Breeders can list available species directly on the Marketplace from a species entry. Tap List on Marketplace, enter pricing, add basic listing information, upload images (minimum one image required), and publish. Marketplace listings do not expire automatically. If you no longer have stock, remove the listing manually. When stock returns, restock and re-list.

A species can be: managed inside the breeder dashboard, tracked as available stock, listed publicly on the Marketplace, removed from Marketplace when out of stock, and restocked later without losing the species record.

9. Badges and Trust Score

The Badges tab shows your trust progress and earned badges. Badges and points are influenced by: selling activity, testing activity, general platform engagement, and reliability and consistency.

9.1. Trust Tiers

- Bronze: 0–39 points
- Silver: 40–79 points
- Gold: 80–119 points
- Platinum: 120+ points

Trust scores recompute nightly. Higher trust tiers unlock enhanced visibility and priority placement in search results.

9.2. Provider Badges

Provider-specific badges include: Verified Breeder, Healthy Stock Signal, Certified Lineage, Fast Responder, and others earned through consistent platform activity. Badges are awarded for specific milestones and contribute to your overall tier standing.

Trust Score and Badges overview

10. Analytics

The Analytics tab gives you access to breeder performance data and business insights.

10.1. Metrics

Sales, stock sold, species count, rating, health, mortality, response timing, and trust score. Health and mortality figures are entered manually.

10.2. AI Insights

The Analytics page includes AI-generated insights, such as guidance on maintaining activity levels to protect or improve your trust score.

10.3. Additional Features

Tier comparison (e.g., current tier: Bronze), average rating, inventory status (Available, Limited, Out of Stock, Coming Soon), species breakdown, seasonal forecast, and rating distribution.

11. Settings

The Settings tab lets you update: name, email, address, profile picture, and other profile details. This keeps your account current and customer-facing information accurate.

12. Profile

Your provider profile is visible to users on the platform. A strong breeder profile should include: clear business name, good bio, accurate contact details, updated social links, profile image, correct address and area, and current stock and availability. Logout is available from here.

13. Trust Intelligence

The Trust Intelligence tab is an AI-powered performance review area. It shows: scores, trajectory, marketing benchmark, performance, rank compared to other breeders, weekly digest, risk breakdown, target rate, and retention scores.

13.1. Predictive Insights

Seasonal demand forecasting, performance forecasting, and badge-related progress. This helps you understand where you stand and what actions may help improve performance.

Trust Intelligence — scores and trajectory

Trust Intelligence — market benchmarking

Trust Intelligence — general demand

14. Provider AI Business Assistant

A floating AI assistant accessible from the bottom-right corner of the app. Interact by typing a question or speaking using voice input.

14.1. What It Does

Provides prompts, reports, chat replies, business guidance, profile improvement suggestions, growth and competitiveness support, and stock and sales thinking.

14.2. Profile-Linked Intelligence

The assistant links directly into your provider profile. Responses are based on your activity, listings, business performance, and current position on the platform.

Provider AI Business Assistant

15. Notifications

The bell icon in the top-left corner contains messages, enquiry updates, purchase activity, and important breeder notifications. When someone purchases a fish, you are notified both in the app and by email.

Notifications

Mark all

Notifications — purchase and enquiry alerts

16. Messaging

Users contact breeders through the app's messaging system. Breeders receive in-app messages and email updates linked to customer contact and purchase activity. When someone purchases a fish, you are notified through both channels.

17. Research Tool

The rocket icon on the dashboard opens the Research tool. This helps breeders explore insights and recommendations.

17.1. What You Can Do

Research the market, review competitors, explore recommended products and fish and stock opportunities, and find suggestions to attract more customers.

17.2. Intelligence Report

Key findings based on your current profile, what competitors may be doing better, products or species selling more strongly, and opportunities to improve competitiveness.

Research Tool — market intelligence

18. Orders, Contact, and Fulfilment

When you receive a purchase or enquiry, follow-up is handled directly between you and the buyer via email. Extra contact details (phone, WhatsApp, etc.) can be shared after initial email contact.

The app does not currently support setting collection-only, delivery-only, or shipping options. These arrangements are sorted directly after contact.

19. Ratings and Reviews

Breeders may receive ratings and reviews. At present, breeders cannot reply to ratings or reviews through the app.

20. Marketplace Access

Providers have access to the same marketplace as users. Browse listings, purchase stock or products, interact with sellers, and use the same buying flow. Breeders can list species directly from their managed inventory with no additional commission.

21. Switching Roles

If you are registered as both a Consultant and a Breeder, switch between dashboards using the role toggle in the top navigation. Both roles share the same account and trust score.

22. Data and Privacy

Your data is protected under the UK GDPR. Client data accessed through the platform is scoped to active interactions and must not be used for purposes other than service delivery. Full details are in our Privacy Policy and Provider Policy.
