

# Aqua AI — Users App Guide

Version 4.0 · May 2026 · Complete User Manual · Operated by Humara Ltd, Registered in England and Wales

---

## 1. Welcome to Aqua AI

Aqua AI is an all-in-one app for aquarium and pond management. It helps users create habitats, add livestock, track water parameters, manage equipment, plan maintenance, receive AI-powered guidance, browse products, connect with consultants, and search local breeders.

This guide walks through every feature of the app so you can get started quickly and use each section with confidence.

## 2. Permissions

The app uses the following device permissions:

- Camera and Microphone — to scan tanks, identify species, detect diseases, analyse water test strips, and use voice input with AquaBot
- Location — to show nearby marketplace listings, consultants, and breeders
- Photo Library / Gallery — to upload images and videos from your device
- Notifications — for booking updates, care plan reminders, marketplace alerts, messages, and system notifications

When first using the app, you will be asked to allow these permissions. You can manage them at any time through your device settings. Allowing the correct permissions ensures you can fully use scanning, voice tools, and location-based search.

## 3. Sign Up and Login

### 3.1. New Users

To create a new account:

- Open the app
- Tap Sign Up at the bottom of the screen
- This will take you to the Aqua AI domain
- Enter your name, email, and account details
- Complete sign-up through the domain

### 3.2. Existing Users

If you already have an account, log in through the app and continue to habitat setup.

### 3.3. Forgotten Password

Password reset is handled through the Aqua AI domain. Open the login area, select the password reset option, and complete the reset process through the domain.

## 4. Getting Started

AQUA AI

## Welcome back

Once logged in, Aqua AI takes you straight into setting up your first aquarium or pond. This first setup gives the app the information it needs to personalise recommendations, maintenance tasks, and habitat insights.

## 5. Create Your First Aquarium or Pond

To create a habitat:

- Enter a name for the aquarium or pond
- Choose the water type: Freshwater, Saltwater, Brackish, or Pond
- Enter the system volume and choose the unit (Gallons or Litres)
- Add optional notes if needed

- Tap Continue

This creates the base habitat profile inside the app.

## 6. Add Fish, Plants, and Livestock

Once the habitat is created, you can begin adding fish, plants, or other livestock. This can be done by:

- Scanning the aquarium or pond with your camera
- Uploading an image
- Uploading a video

- Aqua AI will detect what is in the habitat and suggest adding it to the system. Before saving, you can confirm the quantity, rename species if needed, and review the detected entries. When

## 7. Enter Water Parameters

After saving livestock and plants, the app takes you to the water parameter section.

### 7.1. Standard Parameters

Temperature, Oxygen, Nitrite, Nitrate, Ammonia, and pH.

## 7.2. Additional Saltwater Parameters

Magnesium, Alkalinity, Calcium, and Phosphates.

Freshwater users can also scan a test strip instead of entering results manually. This step can be skipped and updated later.

## 8. Habitat Page

Once setup is complete, go to the Habitat tab using the bottom navigation bar. The Habitat page is the main home for your aquarium or pond.

### 8.1. What You Can Do From the Habitat Page

- Activate the aquarium or pond
- Update habitat information
- Update water parameters
- View species
- View equipment
- Access water history
- Scan the habitat again
- Check stats (opens Maintenance)
- View tank products
- Explore compatible species
- Compare fish growth over time
- Run disease scans
- Add new species manually

### 8.2. Activate Your Aquarium

Tap Activate Your Aquarium to finalise setup and make the habitat live in the app.

### 8.3. Update Habitat Information

You can return to this page at any time to update water parameters, livestock details, habitat notes, and other saved setup information.

## 9. Maintenance and Stats

From the Habitat page, tap Check Stats to open the Maintenance area. This page gives a full overview of aquarium health, care routines, water issues, and recommendations based on the latest data.

### 9.1. The Maintenance Page Includes

- Aquarium health overview with visible health scale on the left-hand side
- Upcoming care routine
- AI recommendations
- Basic recommendations
- Custom recommendations
- AI Water Intelligence
- Water parameter updates
- Water testing history
- Alerts
- Recommended products
- Recommended consultants in the local area

## 9.2. Custom Tasks

Create your own maintenance tasks by tapping the plus button. Each custom task can include: a title, description, scheduled date, repeat interval (every X days), and optional notes. The calendar view shows which dates have tasks assigned. A completed and paused task view lets you track progress. This helps manage both routine care and one-off jobs.

Custom tasks — calendar view

Custom tasks — create task

## 10. Aquarium Health Score

The health score gives you an overall view of how well your aquarium is being managed. It takes into account: how often water changes are completed, servicing and maintenance activity, water test results being entered, and general habitat management consistency.

The health score also contributes to your Trust Score, badge progress, and tier ranking. A visible scale on the left-hand side of the Maintenance page gives you a quick visual indication of overall aquarium health.

## 11. AI Water Intelligence

Below the care routine, you will find AI Water Intelligence. This section helps you understand what your water test results mean and what action may be needed. It can highlight water quality issues, risk areas, AI-generated recommendations, and suggested next steps based on readings. This turns water test data into practical guidance.

## 12. Water Parameters and History

The Water Parameters section gives quick access to both current readings and historical trends. Use the cog icon to update parameters and the graph toggle to view previous test history over time. This makes it easier to track changes, spot trends, and monitor long-term stability.

Water parameter history — trend graph

## 13. Alerts and Recommendations

Below the water parameters section, Aqua AI displays alerts, recommendations, and guidance linked to the latest results. This helps you identify what needs attention and what action may be appropriate.

## 14. Recommended Products

Aqua AI recommends products based on water quality and habitat needs, organised into three tabs:

### 14.1. Water

Products for pH, ammonia, test kits, alkalinity, magnesium, calcium, bacteria, nitrite, nitrate, and water conditioners.

### 14.2. Equipment

Products for skimmers, aeration, filters, and temperature control.

### 14.3. Maintenance

Products for cleaning and general maintenance.

### 14.4. Product Actions

Each product gives you quick actions: tap Buy Now to go straight through to Amazon and purchase, or tap Save to store the product in your Habitat page for future reference.

## 15. Recommended Consultants

The Maintenance section may also display recommended consultants in the local area, giving you quick access to professional support if needed.

## 16. AquaBot

Aqua AI includes a floating AI assistant called AquaBot. It appears as a button you can tap at any time. AquaBot can be used to ask questions about aquarium or pond care, start new chats, get support through text, or use voice to ask questions. This gives you instant support without leaving the main app flow.

AquaBot — AI assistant

## 17. View Species and Habitat Details

On the Habitat page, tap the eye icon to view more detailed habitat information. This section gives a fuller breakdown of livestock, equipment, products, and species-related tools.

### 17.1. What You Can Do Here

- View species in the habitat
- Switch between species and equipment using the side toggle
- Open water history from the top-right History option
- Scan the aquarium or pond again using the orange scan box (video or image)
- View tank products
- Explore compatible species
- Compare fish growth over time
- Run disease scans
- Add new species manually via the green plus button

## 18. Tank Products

The Tank Products section on the Habitat page shows products linked to the aquarium or pond. Once products have been added, this section gives you a clearer view of what is currently being used.

### 18.1. Product Information

- Products currently added to the habitat
- Product volume in litres or millilitres
- Whether the product is full or needs to be reordered
- Product information and usage guidelines

## 18.2. Dosing Information

For supported products, the app shows dosing details based on the habitat's water parameters: recommended dosage, when the next dose is needed, when the last dose was completed, and how many doses of that product have been used. This helps keep dosing accurate and easier to track over time.

### 18.3. Product Actions

Delete a product or reorder it using the blue button. This makes Tank Products both a product record and a dosing tracker for the habitat.

## Tank products — product list

## Tank products — dosing details

Tank products — reorder and manage

## 19. Compatible Species

The Compatible Species feature helps you explore species that may suit your habitat. It can also show local availability, in-stock status, and not-in-stock status in the local area. This makes it easier to make informed stocking decisions.

## 20. Comparative Species

The Comparative Species feature allows you to compare fish size over time. This can help with tracking growth, monitoring development, and comparing changes since the fish was first added.

Comparative species — growth comparison

## 21. Disease Scan

The Disease Scan feature (blue starfish icon) lets you scan a fish to check for possible health issues and receive guidance based on what the app identifies. This is designed to support early detection and improve response time when issues appear. Available on Premium and Pro tiers.

Disease scan — health check

## 22. Add New Species

To manually add new fish or livestock, tap the green plus button. Search species from the Aqua AI database (20,000+ species) and add them directly to the habitat.

## 23. View Individual Species Details

Tapping on a species opens a detailed profile showing: size, temperature range, pH range, quantity in the aquarium, and compatibility issues. You can also generate extra AI insights for that specific species.

## 24. Equipment

The Equipment page lets you log and manage equipment linked to the habitat. Tap Add Equipment and select the type: Filter, Heaters, Lights, Air Pumps, CO2 Systems, Pumps, Protein Skimmers, Thermometers, Water Testing, or Other. Equipment details include: name, brand, wattage, model number, notes, and images. Saved equipment is attached to the specific tank or pond.

## 25. Marketplace

The Marketplace is the third tab on the bottom navigation bar. This is where you can browse, buy, and list aquarium-related items.

### 25.1. Search and Filters

Search for aquarium products, fish, tanks, equipment, plants, and accessories. Filter by category (All, Fish, Equipment, Plants, Accessories), listing type (All, Bid, Fixed Price), and radius in kilometres.

## 25.2. My Listings, Messages, and Profile

Within the Marketplace tab, access My Listings (active listings, bidding activity, prices), Messages (direct marketplace messaging), and Profile (marketplace identity and activity). The bell icon shows purchase requests sent, seller responses, and other marketplace notifications.

## 25.3. Create a Listing (Premium/Pro)

Tap the plus button. Complete: title, description, minimum price, maximum price, bid or fixed price, category, subcategory, area/location, thumbnail image, and gallery images. Tap Create Listing to publish. Free tier users can browse and buy but cannot create listings.

The screenshot shows the 'Create Listing' form in the Aqua AI app. At the top, the status bar displays the time 07:09, signal strength, and battery level. The app header includes the Aqua AI logo, a notification bell, a user profile icon, and a badge indicating '0 pts Beginner'. The form itself is titled 'Create Listing' and contains several input fields: 'Title', 'Description', 'Min Price' (set to 0), 'Max Price' (set to 0), 'Listing Type' (with 'Fixed Price' selected over 'Bid'), 'Category' (set to 'Fish'), 'Subcategory' (set to 'Select subcategory'), and 'Listing address'. Below these fields are three buttons: 'Pick Thumbnail', 'Pick Gallery Images', and a large 'Create Listing' button. At the bottom, a dark navigation bar features five icons: 'Maintenance', 'Habitat', 'Marketplace' (highlighted in green), 'Consultants', and 'Breeder's'.

Create a marketplace listing

## 25.4. Buy Through Marketplace

Tap on a listing. Message the seller or tap Buy Now. A purchase request is sent to the seller. You receive a notification confirming the request. Once the purchase is completed, you receive a confirmation email with seller details and the seller's email address. You can then contact the seller directly and arrange payment.

Buy Now — listing detail

Buy Now — purchase request

Buy Now — confirmation

Purchase confirmation email with seller details

## 25.5. View Seller Profile

Tap a seller's name or profile image to view their marketplace profile, including their listings, activity, and trust score.

## 25.6. Marketplace Purchase Flow

Browse listing → Send purchase request → Receive confirmation email → Get seller details  
→ Contact seller directly → Arrange payment.

## 26. Consultancy

The Consultancy tab is the fourth tab on the bottom navigation bar. This section lets you search for consultants and professional support. Available to all subscription tiers.

### 26.1. Search Areas

Three main search categories, each with specific service types:

- Consultancy: Coaching, Education, One-off advice, Testing, Urgent aquarium or pond support, Water quality checks.
- Pond: Construction, Equipment, Filtration, Fish health and support, Maintenance repair, Seasonal preparation, Water quality.
- Aquarium and Tank: Access/gate and design, Breakdown removal, Disease and health support, Equipment and optimisation, Get well fish, Maintenance, Setup installation, Stocking compatibility, Water assessments.

You can set a radius from your location to find nearby services.

### 26.2. Find a Consultant

Choose a category, select the service required, set the preferred radius, and tap Search Consultants. The app shows available consultants matching your criteria.

Find a consultant — search results

## 26.3. Consultant Profiles

Tap a consultant to view: name, reviews, about section, services, costs, social links, email, booking insights, history, and trending information.

## 26.4. Request a Consultation

Tap Request a Consultation. Describe the issue, select a date, choose an available time slot, and confirm. The booking appears as Pending until the consultant responds (72-hour response window). A 10% platform commission is included in the booking price and deducted from the consultant's earnings.

## 26.5. Cancellation and Rescheduling

If a consultant cancels or reschedules, you receive an email and an in-app message. Consultant cancellations result in a full refund to your original payment method. User cancellations receive no refund. Rescheduling has no financial impact.

## 26.6. Chats and Bookings

Active chats appear in the top-right corner. The bookings section tracks upcoming, completed, and pending bookings. Messaging between you and your consultant is handled through active chats and is scoped to the booking.

## 27. Breeders

The Breeders tab helps you search for local breeders and available species.

### 27.1. Search

Search by water type (Freshwater, Saltwater, Pond fish, Marine), radius, species name, and local breeder availability. You can search for a species directly, browse species from the database, or apply filters to see whether breeders currently have stock available.

## 27.2. Contact and Payment

Once you've found a breeder and made contact, payment is arranged directly after email communication. Payment is handled by the breeder directly, typically through PayPal or bank transfer.

Breeder flow: search for species or breeders → find available stock → make contact → continue by email → arrange payment directly with the breeder.

## 28. Community Showcase

The Community Showcase is an opt-in feature that lets you share your aquarium or pond with the wider Aqua AI community. You choose whether to make a tank visible, and you can turn visibility on or off at any time.

### **28.1. How to Showcase Your Tank**

- Go to your tank settings or tank detail page
- Enable Community visibility for that tank
- Add a showcase title and description
- Choose which images to display, or let the app use your existing tank images
- Save — your tank will appear in the Community feed

### **28.2. What You Can Do in the Community**

- Browse other users' showcased tanks
- Like or unlike showcased tanks
- Message a tank owner directly from their showcase
- Earn Community rank badges through participation

### **28.3. Community Rank Badges**

Participating in the Community earns you rank badges based on likes received, app engagement, and having an active showcase. Community ranks progress through: Novice, Senior, Enthusiast, Professional, Expert, Leader, Veteran, Master, and Ultimate.

### **28.4. Privacy and Control**

Your showcase is entirely opt-in. You can hide your tank from the community at any time. Messaging through the community is handled through the app's existing messaging system and is tied to the showcase interaction.

## 29. Settings and Profile

From the top bar, open the Settings area. This includes: profile picture, first name, last name, email, option to show or hide your profile from other users, address, profile update options, and your current plan shown in the top-right corner.

Settings and profile page

## 30. Subscription Management

Users begin on the Free plan. To upgrade, open the profile area, view the current plan level, select the upgrade option, and complete through the Aqua AI domain.

### 30.1. Subscription Tiers

- Free (£0): 1 habitat, species identification, basic water tracking, basic care plan, marketplace buy-only, consultant booking, breeder access, community showcase.
- Premium (£14.99/month or £144.99/year): Up to 3 habitats, disease detection, AI chat (100/month), AI maintenance plans, marketplace buy and sell, consultant booking, breeder access, community showcase.

- Pro (£24.99/month or £239.99/year): Unlimited habitats (including pond), full AI (500 chats/month), advanced analytics, preventative alerts, data export, full marketplace access, community showcase.

## 30.2. Early Adopter Promotional Pricing

Aqua AI offers promotional pricing for the first 1,000 registered users. Early adopters receive a reduced rate that is locked in for as long as they remain subscribed.

- Premium Promo: £11.99/month or £114.99/year
- Pro Promo: £19.99/month or £189.99/year

This promotional rate is grandfathered — meaning it stays with you permanently as an early adopter, regardless of future price changes. If you cancel your subscription, you have a 30-day grace period in which you can resubscribe and retain your promotional rate. After 30 days, the standard pricing will apply.

## 30.3. Billing and Payments

Billing is handled through the Aqua AI domain. Supported payment methods: Apple Pay, Google Pay, and credit/debit cards.

### Choose Your Plan

Unlock AI, insights, and marketplace power.

**PRO**

**BEST VALUE**

£24.99 / month  
£240 per year

- ✓ Full AI Suite & Complete Access

Subscription management — plan overview

## 31. Referral Programme

Aqua AI rewards you for referring new users to the platform. When someone signs up using your referral link and subscribes, you receive a 10% recurring credit on their subscription for as long as they remain active.

- Credits are applied to your account balance and offset future subscription charges
- Free tier users accumulate referral credits as a held balance, which is applied automatically when they upgrade to a paid plan
- There is no limit to the number of referrals you can make

Referral details and your unique link can be found in your profile or account settings.

## 32. Notification Settings

Notification settings can be adjusted from the top-right area of the app. Manage which notifications you receive: messages, bookings, requests, marketplace activity, care plan reminders, and general app activity.

## 33. Trust Score and Badges

The top-right area shows your Trust Score. Badges are earned through platform activity: water testing, water quality maintenance, purchasing, adding fish, general engagement, and community participation. Your trust score affects your tier ranking, badge progress, and marketplace visibility.

### 33.1. Trust Tiers

- Bronze: 0–39 points
- Silver: 40–79 points
- Gold: 80–119 points
- Platinum: 120+ points

Trust scores recompute nightly. Higher trust tiers unlock enhanced visibility and priority in search results.

### 33.2. How to Earn Points and Badges

Points and badges are earned through consistent, quality activity on the platform. Activities that contribute include: regular water testing, maintaining good water quality, completing care routines, adding and managing species, marketplace activity, booking consultants, community showcase participation, and receiving likes on your showcased tanks.

Badges are awarded for specific milestones and activities. Your badge collection is visible on your profile and contributes to your overall tier standing.

## 34. AI Features Summary

- Species Identification: image, manual video, and live video analysis
- Disease Detection (Premium/Pro): AI identifies diseases from images and video
- Water Parameter Analysis: scan test strips or enter manually; AI interprets and advises
- Compatibility Checker: evaluates species compatibility with existing tank
- Care Plan Generation: automated, personalised maintenance schedules
- Product Recommendations: AI-selected products with dosage calculations
- Health Risk Indicators: anomaly detection for critical parameters
- Preventative Alerts (Pro): predictions based on historical data trends
- AI Chat via AquaBot (Premium: 100/month, Pro: 500/month): text and voice
- AI Water Intelligence: practical interpretation of water test data
- Comparative Species: growth tracking over time
- Tank Health Score: overall vitality index

All AI outputs are advisory. Verify critical decisions with qualified professionals.

## 35. Data and Privacy

Your data is protected under the UK GDPR. Images for AI scanning are processed on-device where possible. Cloud data is encrypted and stored securely. Community showcase data (likes, messages, engagement) is processed as part of your platform activity. You can request access to or deletion of your data at any time by contacting [info@aquaai.uk](mailto:info@aquaai.uk). Full details are in our Privacy Policy at [www.aquaai.uk/privacy](http://www.aquaai.uk/privacy).

## 36. Support

For help, contact us at [info@aquaai.uk](mailto:info@aquaai.uk) or visit [www.aquaai.uk/support](http://www.aquaai.uk/support).
